Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2155

Claims 1-32 are active.

Claims 1-16 and 23-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to the recitation "and also enabling the port, when configured to support a wireless edge device, to automatically configure a wired edge device attached to the port to function as a wireless network access point" has no support in the specification. The switch (12) shown in Figure 1 is for configuring a wireless access point device when it is connected to the port. The switch does not configure a wired edge device to function as a wireless network access point.

Claims 10-16 and 29-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jones (USP 6,137,802) in view of Kmack (USP 6,304,851).

Interpretation of the Jones and the Kmack references have already been set forth in the last Office action. The interpretation is incorporated herein by reference thereto.

In the communication filed on 1/22/2007, Applicants contended that the claim (claim 1) requires two levels of configuring, involving changes to other than end user devices. In the first level, the port of a network switch (not end user devices) is configured to support either a wireless edge device or a wired device. In the second level, operative when the port is configured to support a wireless edge device, a wireless edge devices, when attached to the port, is automatically configured so that it functions as a wireless network access point for one or more end user devices. The limitations are not found in the rejected claims.
